

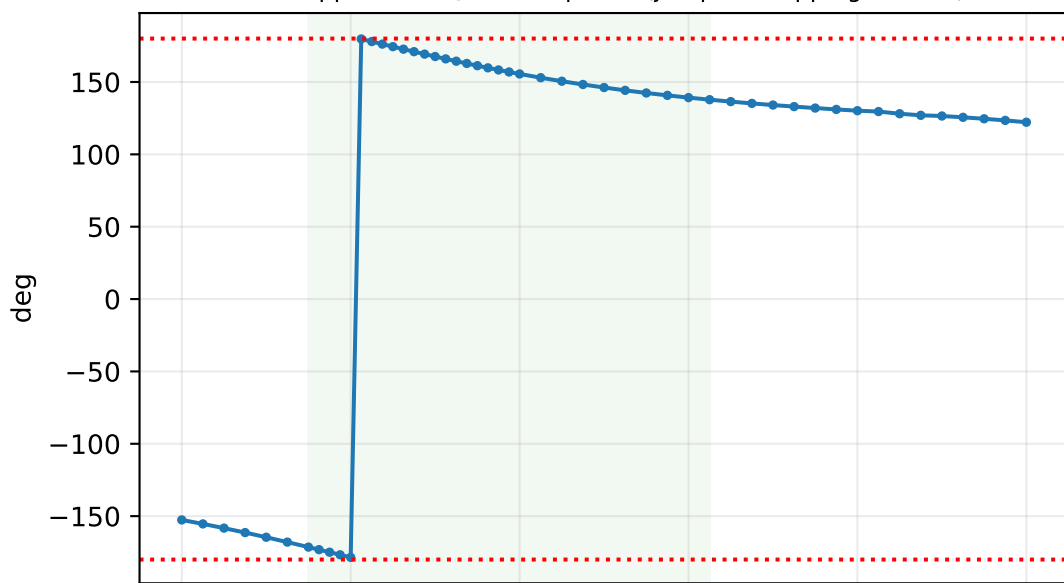

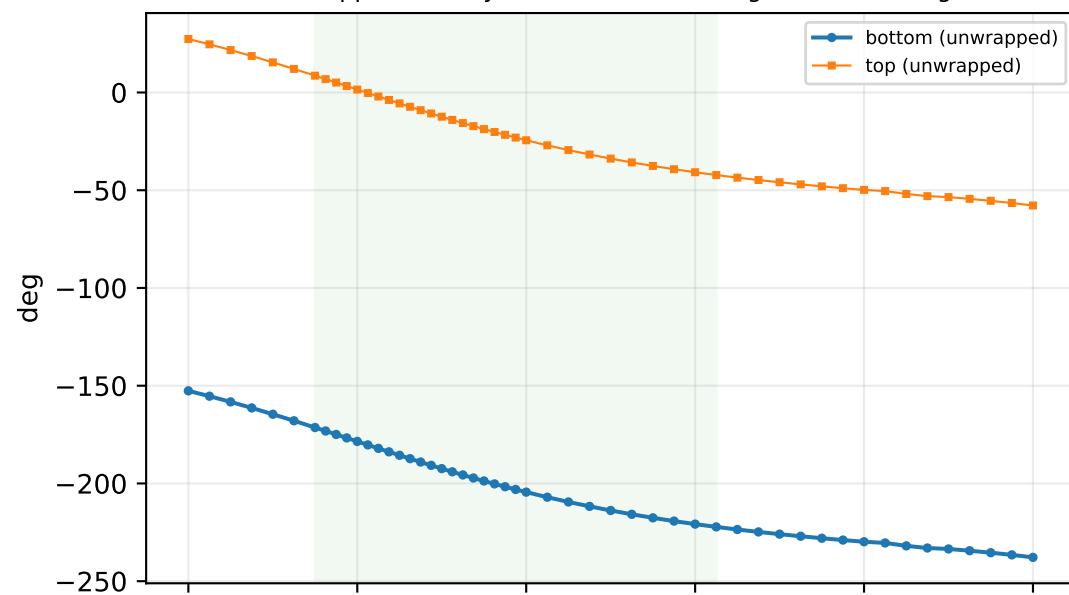

FIGURE 1 - P0550 thickness phase-knob audit (1332.5 nm)

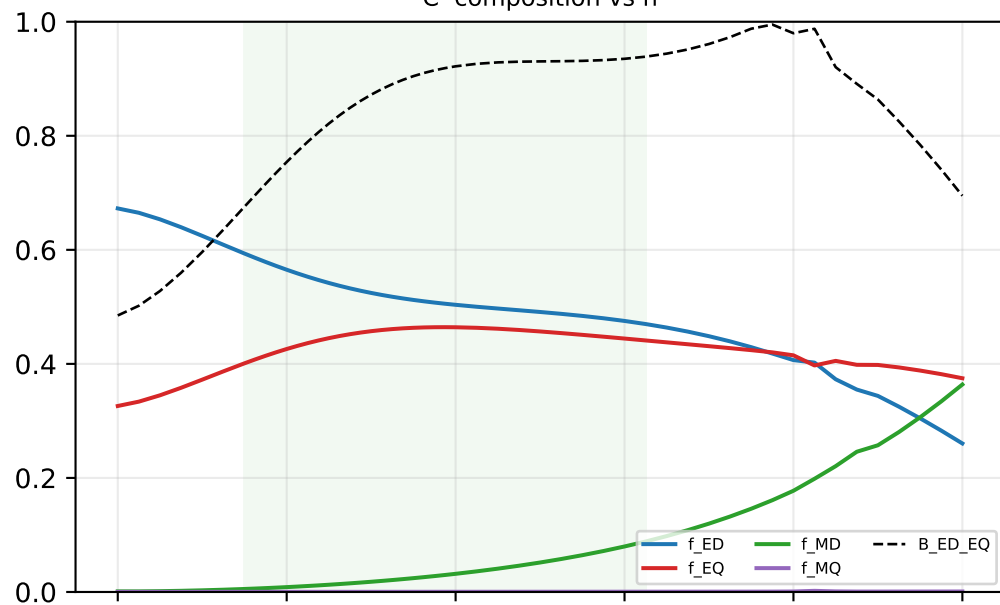

A wrapped ED-EQ bottom phase (jump = wrapping artifact)

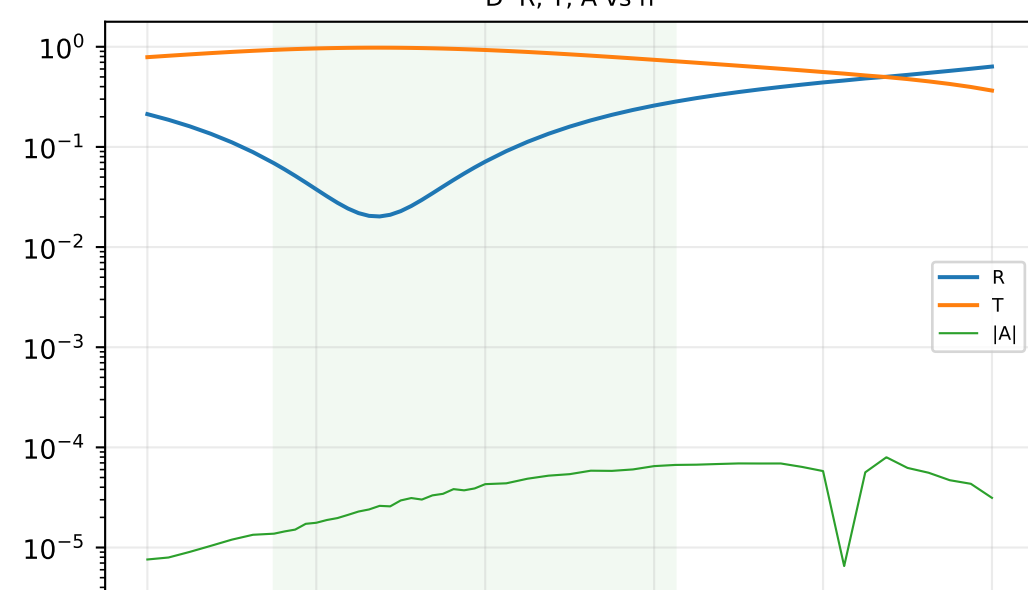

B unwrapped: strictly monotonic, -1.34 deg/nm in knob region

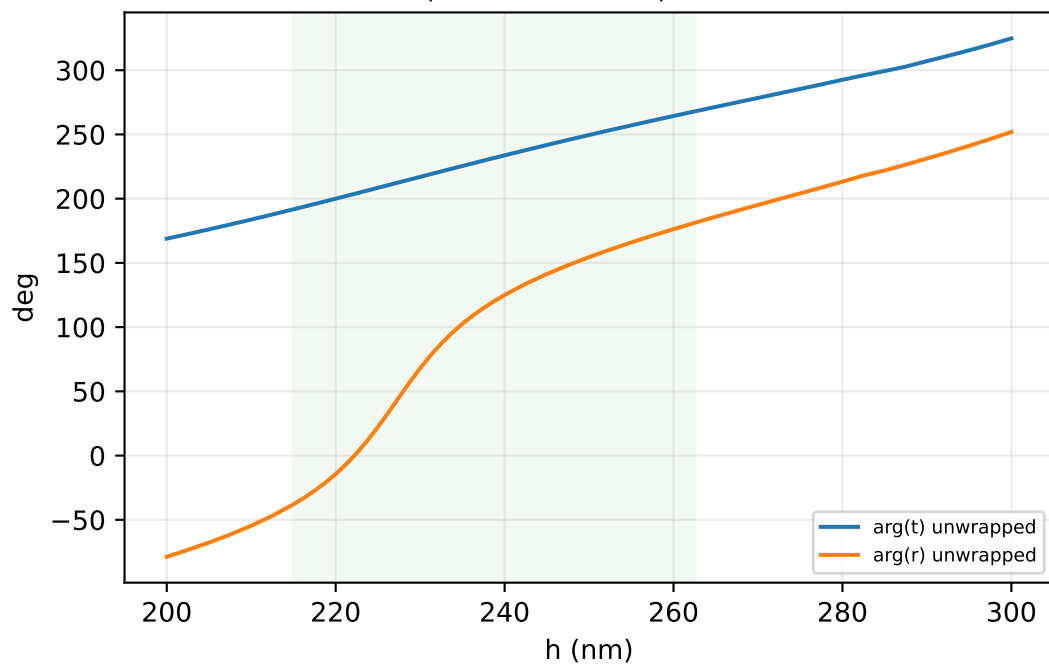

C composition vs h

D R, T, A vs h

E device phases (corr with dphi: -0.98 / -0.99)

F arg(t) coverage over identity interval h=215-262.5: 76 deg
